NEXT GENERATION
KEYLESS ACCESS CONTROL

For world class wire-free
building security

SALTO SYSTEMS – ONE JUMP AHEAD

Better security. Added value. Enhanced productivity.
More efficient management. SALTO can equip you
with world class, keyless and future-proof access
control that delivers substantial benefits.
Since 2001, SALTO has been driven by our vision of
creating world class access control systems that are
simple and efficient to use. We give you the ability
to control all your access needs and secure all your
doors without the need for complex and expensive
wiring, providing total control over who is able to
access what, where and when at all times.
Having revolutionized access control around the world
in sectors where security is critical – from airports and
healthcare to education and hotels – we continue to
innovate to ensure we deliver the most advanced and
flexible electronic locking solutions in the market.

SALTO VIRTUAL NETWORK (SVN)
DATA-ON-CARD
ACCESS CONTROL SYSTEM

The SALTO Virtual Network (SVN) provides the flexibility for an access control system to grow from a small number of doors and users to a large number of doors and users as required. It allows stand-alone locks to read, receive and write information via an encrypted and secure data-on-card system that utilizes the capabilities of RFID read/write technology. In SVN all access data is stored on and distributed by its operating smartcard. When presenting a smartcard to an offline stand-alone door, not only does this control access rights to that door but thanks to two-way communication, the door also writes data like blacklist information or battery status back to the smartcard. The smartcard then transmits this information back to the server via online wall readers that are able to update and receive information from the cards anytime and anywhere in the building.

SALTO WIRELESS
WIRELESS REAL-TIME
ACCESS CONTROL SYSTEM

To further the level of security, SALTO has developed the XS4 Wireless online solution. It is designed for applications that need high level real-time access control. SALTO Wireless can be used as an independent system or as a complement to SALTO Virtual Network (SVN) and hardwired IP solutions. It connects battery-powered electronic escutcheons and cylinders by means of low power radio transceivers (2.4 GHz). These interact with XS4 gateways, which are connected by Ethernet/WiFi to the central management computer. With a single click of a mouse you can configure or make changes to the network in real-time. You can also download audit trail information for real-time control, delete users remotely and securely, collect battery status for maintenance and much more, all from a single PC and all in real-time.

XS4
ESCUTCHEONS
FLEXIBLE AND WIRE-FREE

With a large variety of models, XS4 electronic escutcheons fit virtually any door, including those with narrow frames. They are also suitable for use at fire doors and emergency exits. Totally wire-free and networked through SALTO Virtual Network and SALTO Wireless network. Compatible with most European, Scandinavian and ANSI mortise locks and tubular latches.

XS4
MINI ESCUTCHEON
EASY INSTALLATION

The XS4 Mini escutcheon sets a new standard for easy installation: just remove the existing handle set and install. No complicated hard wiring or drilling. With XS4 Mini, doors maintain their fire certificates because no alteration to the door is required. Totally wire-free and networked through SALTO Virtual Network and SALTO Wireless network.

XS4
WALL READER
CONTROL AND UPDATE

Wide range of wall readers, with or without keypad, for indoor or heavy-duty outdoor applications. For controlling access rights and as an update terminal in SALTO SVN. In combination with XS4 control units, enables the expansion of SALTO access control to all entrances where stand-alone door components cannot be fitted, e.g., automatic doors, barriers and lifts. Latest electronics provide more functionality such as BLE, with product available in Black or White and in all relevant RFID technologies.

XS4
GEO CYLINDERS
COMPACT AND VERSATILE

Extensive range of compact sized electronic cylinders designed for doors where fitting an electronic es-cutcheon is not possible or required. Totally wire-free and networked through SALTO Virtual Network and SALTO Wireless network. Available in different models, e.g. half cylinder, cylinder with thumb turn, double cylinder, cam lock cylinder, padlock, and with a wide offering of different profiles, e.g., Euro profile, UK oval, Swiss Round, Australian oval, Scandinavian profiles, ANSI profiles.

AELEMENT
DESIGN-LOCK
ELEGANT AND EFFICIENT

AElement is the minimalist RFID lock with stylish design. It allows the integration of all physical security needs in an energy efficient and easy to manage system. Totally wire-free and networked through SALTO Virtual Network and SALTO Wireless network. Compatible with DIN standard and ANSI mortise locks. Available in a choice of colours, AElement can also be combined with a wide range of designer handles.

XS4
LOCKER
ELECTRONIC AND ROBUST

The XS4 Locker provides high level security to a wide range of lockers, cupboards, cabinets, boxes, etc. by integrating it into the SALTO wire-free electronic access solution. It features an ergonomically designed twist operated locking handle that makes for easy use, even with wet hands. The battery pack, electronic components and locking mechanism are all located on the inside of the door, safe from potential vandalism or sabotage.

XS4 SOFTWARE PROACCESS
ORGANISING AND MANAGING

ProAccess SPACE is a web-based management software consisting of six modules with different functionalities. Several add-ons allow for tailor-made extensions. The software delivers a powerful and easy-to-use access control management that is suitable for use in all kinds of environments and can manage up to 4 million users and 64,000 doors. Thanks to an interface that helps users find and operate the functions they want, the software is used quickly and intuitively.

XS4 CREDENTIALS
OPTIONS FOR EVERY NEED

Wide range of versions to suit user's individual needs. XS4 credentials are waterproof, copy proof and have multi-application capabilities. Contactless carriers are available as smartcards, fobs and bracelets with RFID technologies including Mifare Classic, Mifare DESFire EV1, Legic prime, Legic advant and HID iClass among others. Special solutions are possible upon request.
